

Before you start

This Driver operates with the Windows Mobile 5 Operating System for Smartphones.

Check that the Fabric Keyboard has power. The Fabric Keyboard requires 2 x AAA batteries (supplied):

1. Remove the slide-on cover on the Fabric Keyboard
2. Insert 2 x AAA batteries in the correct orientation into the battery compartment
3. Replace the slide-on cover

Installing the Driver

Your Smartphone requires a Driver in order to connect to and operate with the Fabric Keyboard. To install the Driver:

Installation via **ActiveSync**:

1. Ensure ActiveSync is installed on your PC before starting
2. Insert the supplied Fabric Keyboard CD into your PC
3. Connect the PC to your Smartphone using ActiveSync
4. From the CD, run the application called '**FabricKeyboard.exe**'
5. Follow the on-screen prompts displayed on the PC and then on the Smartphone
6. You may be required to restart your Smartphone to complete the installation

Installation via **InfraRed** or **Bluetooth**:

1. Insert the supplied Fabric Keyboard CD into your PC
2. Transfer the file '**FabricKeyboardSP2005.arm.cab**' from the CD to your Smartphone via a Bluetooth or InfraRed connection
3. Install the file on the Smartphone by running it from its location (the default location for transferred files is '**My Documents**')
4. Follow the on-screen prompts displayed on the PC and then on the Smartphone
5. You may be required to restart your Smartphone to complete the installation

Installation is now complete. The '**Fabric Keyboard**' application will appear in the '**Programs**' section under '**Start Menu**'.

Connecting to the Fabric Keyboard

To connect the Fabric Keyboard to your Smartphone:

Establishing a Pairing Between Keyboard and Device

1. Navigate to the 'Bluetooth' menu (normally under 'Start' > 'Settings' > 'Connections' menu i.e. from start menu, press 'Settings' and then 'Connections' and then 'Bluetooth').
2. Got to the 'Devices Menu' (normally under the 'menu' tab).
3. Ensure that the keyboard is ON (green light constantly on) and then select 'new' device from the menu .
4. Once 'Keyboard' is found , select it and enter the passcode when prompted (0000)
5. Accept the displayed name for the keyboard (or change as desired)
6. When prompted select the 'Serial Port' service that is offered.
7. Return to the main Bluetooth screen
8. If there is an option to select the COM port (normally under the Menu tab) select this option.
9. Select the 'keyboard' from the displayed list and then 'New Outgoing Port'.

10. Select the 'Keyboard' again and then the COM port to use (e.g. COM6). Note that if there is an option to select 'Secure Connection' then – deselect this to reduce connection problems.
11. Once the bonding process is finished, press 'Done' repeatedly to navigate back to the home screen.
12. To launch the application, navigate thru the start menu to find the 'Fabric keyboard' application and then select this to launch the application.
13. From the keyboard 'Options' menu, press '1 Connected ?' to connect to the keyboard and wait until the connection is made (at which point you will hear a chimed signature and will be able to observe the green power indicator start flashing on the keyboard, and the status line on main page say 'Connected').

Important: During the pairing process, the keyboard may power down after a minute if no pairing has been established. If this happens power up the keyboard again (by pressing the power switch until the indicator light comes on steady) and continue (you may need to re-connect or search for Bluetooth devices again)

If connecting to a different keyboard to one previously connected, it is suggested that before pairing is attempted, the keyboard application is quit, Bluetooth is turned OFF and then ON again. Also, should you change your keyboard a new pairing will need to be established.

Connection is now complete. Follow the on-screen prompts to perform a calibration (this is recommended, see User Guide for details)

Troubleshooting

Smartphone will not pair with the Fabric Keyboard?

- Check that the Smartphone's Bluetooth is ON from the '**Bluetooth**' menu option (an icon normally appears).
- Check that the Fabric Keyboard is ON and in pairing mode (the green light should be on constantly)
- From the Bluetooth menu, where Bluetooth devices are displayed, perform a '**Refresh**' before selecting '**keyboard**'

The characters appearing on screen are not as typed?

- Perform a calibration. From the Fabric Keyboard application select '**Options**' > '**Calibration**' > '**Start Calibration**' and follow the on-screen instructions

Bluetooth will not turn ON within the Smartphone menu?

- Power cycle the Smartphone (turn the device OFF and then back ON again) or perform a soft reset
